

Ghost PRO Investigation Procedures

The GHOST PRO team members will arrive on site prior to the scheduled appointment time with all necessary equipment to conduct the investigation.

The client is not expected to provide any equipment, materials, or refreshments other than materials the client deems pertinent to the investigation. If the need for an additional power source should arise, the GHOST PRO team will request permission prior to "plugging in".

The client is requested to participate in a preliminary walk-through of the site to insure the orientation, safety and property verification for GHOST PRO team members.

Preliminary readings and data collection may be obtained during this time.

The GHOST PRO investigative team will set up such equipment as needed to monitor and record data and/or any evidence of phenomena that may occur.

The investigation will last approximately three to four hours dependent upon the events that may occur.

The client may observe the investigation in progress, but is requested not to actively participate unless specifically requested by the GHOST PRO team.

At the conclusion of the investigation the client is requested to participate in a final walk-through of the site to insure that no property has been damaged.

All data collected during the investigation will be analyzed in a timely manner and the findings will be presented to the client in a hard copy media format.

GHOST PRO cannot and does not guarantee any results that conclusively confirm or deny events of possible paranormal origin.

GHOST PRO can only offer possible explanations of events that occurred and were witnessed or documented during the investigation period.

Ghost PRO Investigative Equipment

The GHOST PRO team will utilize equipment during an investigation that consists of but is not limited to the following:

Sony Night Shot Digital Video Camera

JVC Digital Video Camera
